-   Real-time integration with Accpac Order Entry (as well as Accounts Receivable and Inventory Control) removes the need for manual order entry or invoice re-keying.

-   Flexible inbound

mapping gets data where you need it in Accpac.

- On-the-fly cross-referencing of item codes, units of measure, ship to codes, allowance and charge codes, and other codes to make sure data gets translated correctly

between your trading partners and your accounting system.

- Price checking and validation ensures accurate prices are posted to your sales orders.

- Actual shipped

quantities updated within Accpac, allowing accurate and automatic shipment and invoice creation.
